

Jira Board Unimplemented Test Cases

TC-11: Verify editing an existing issue updates all fields correctly

Severity: CRITICAL

Description: Ensures that the edit functionality updates and retains all modified fields as expected. Validates UI behavior and data persistence.

Preconditions: An issue already exists on the board.

Steps

1. Locate an existing issue card on the board.
2. Click the card to open its detail view.
3. Edit the title, description, priority, and assignees.
4. Save the changes.
5. Reopen the card.
6. Verify that all changes are saved correctly.

Expected Result

The issue card reflects all updated data accurately.

TC-12: Verify issue deletion removes the card from the board

Severity: CRITICAL

Description: Validates the deletion process of an issue, including UI interaction and proper removal from the board view.

Preconditions: An issue exists in any column.

Steps

1. Locate and open an issue card.
2. Click the delete or trash icon.
3. Confirm deletion in any confirmation dialog.
4. Verify the card is no longer present on the board.

Expected Result

The issue is removed and cannot be found in any column.

TC-13: Verify user can reorder cards within the same column

Severity: NORMAL

Description: Tests drag-and-drop functionality and persistence of card order in a single column.

Preconditions: Column has at least 2 cards.

Steps

1. Drag a card within the same column to a different position.
2. Observe the card's new position in relation to other cards.

Expected Result

Card is reordered successfully.

TC-14: Verify user can drag and drop a card between different columns

Severity: NORMAL

Description: Verifies the ability to change a card's column with drag and drop and ensures it visually and functionally reflects the change in the UI.

Preconditions: At least one card is available in a column.

Steps

1. Locate a card in one of the columns (e.g. Backlog).
2. Click and hold the card to initiate drag.
3. Drag the card to a different column (e.g. Done).
4. Drop the card in the new column..

Expected Result

The card is no longer present in the original column and appears in the new one.

TC-15: Verify Create Issue button is disabled until short summary is entered

Severity: CRITICAL

Description: Verifies that users cannot submit a blank ticket, and that Create Issue button becomes available only after entering a valid title/short summary.

Steps

1. Click on the button to add a new issue.
2. Leave all fields blank and observe the "Create Issue" button..
3. Enter a value in the short summary field
4. Observe the state of the "Create Issue" button again.

Expected Result

The button remains disabled until summary is entered, after which it becomes clickable.
